DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 65-66 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sheppard et al. (U.S. 6, 284,569) in combination with Kato et al. (U.S. 6,179,127).

7. Sheppard discloses a method wherein side and cross bars (via stiff carrier) are connected to a substrate film (501) to define a plurality of substrate units and to form a support material at a region on the film (Column 2, Lines 12-13) such that a plurality of dies interface with the substrate (Column 4, Lines 64-65; Column 5, Lines 24-25) by leads from dies (Column 5, Lines 23-25) via lead over the die (shown in Fig.8) and leads under dies (Fig. 9), wherein the leads are interface through the cavity and a

portion of said carrier is removed at the completion of a manufacturing process (Column 2, Lines 49-60) which inherently removes the substrate unit from the substrate film, the support member ("carrier") to the substrate inherently connects (via adhesive), thickens the edges of the film and adds enhance rigidity (via stiffness of carrier).

Sheppard does not appear to disclose forming a central cavity in each substrate unit, however Kato teaches forming a cavity in each substrate unit (Fig 1,2) and aligning a die with said cavity.

It would have been obvious to one of ordinary skill in the art to modify the substrate unit of Sheppard by incorporating a cavity in each substrate unit in order to increase durability of the tape as taught by Kato (Abstract).

Allowable Subject Matter

Claims 59-64 are allowable the following is a statement of reasons for the indication of allowable subject matter: the prior art does not disclose or make obvious a method of manufacturing side bars on a substrate that is constructed of polyimide with a solder resist, where the side bars and substrate are transported through a manufacturing process and removing said side bars.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
